New Product Introduction

A New Pistol for a New Caliber. Only from Smith & Wesson.

THE MODEL 4006 IN .40 SMITH & WESSON

A new handgun designed to shoot a new cartridge. The perfect way to inaugurate Smith & Wesson's new decade of innovation.

Developed in a joint venture with Olin-Winchester, the .40 S&W and the Model 4006 were made for each other. The resulting package is remarkably flexible, and appropriate to a wide variety of uses from law enforcement to serious competition. It's an almost perfect balance of major caliber performance in a high capacity pistol of very manageable size.

Law enforcement officers will like the fact that they can get the power and full eleven-plus-one-round capacity they need in a pistol that's as comfortable to carry as our full-size 9mms. Naturally, this newest member of our Third Generation offers all those qualities that set our pistols apart from their competition: superior ergonomic design, the most consistently smooth trigger pull available, tough construction, endurance and outstanding accuracy.

On the sporting side, this pistol has tremendous appeal for I.P.S.C.-style and other speed event competitors. The factory-loaded .40 S&W easily makes major caliber without undesirable pressure levels. Its high capacity also means fewer reloads.

And it's a natural for home and personal protection, since it offers stainless steel convenience, all the famous Smith & Wesson safety features and reliability, and still keeps its trim profile.

With the Model 4006, Smith & Wesson steps firmly into the future with a pistol line that offers you every caliber you ever wanted—plus.
